

ÇANKAYA UNIVERSITY
FACULTY OF ARCHITECTURE
DEPARTMENT OF ARCHITECTURE
ARCH-407 PROFESSIONAL PRACTICE AND ETHICS
2023-2024 FALL SEMESTER

Final Work

Due for Submission (will be in January 2024-exact dates will be announced later)

Analysis of a Design Process:

In this course, each student will conduct a comprehensive analysis of a building process, encompassing the pre-design, design, and construction phases. The analysis will take into account the legal framework necessary for project submission and permissions required for construction. To accomplish this, students will engage with an architectural firm and select one of their projects for analysis. The analysis should cover the following aspects:

1. Legal Paperwork and Approval Paths:
 - Identify the legal paperwork and documentation required for project approval.
 - Collect all relevant documents related to legal procedures, permits, and permissions.
 - Conduct interviews with the architect(s) involved to gain insights into the legal processes followed.
2. Management Actions and Facts:
 - Investigate the management actions and facts associated with the project.
 - Examine how project management was executed, including aspects like scheduling, budgeting, and resource allocation.
3. Design Process Details:
 - Provide a detailed account of the design process, highlighting key milestones and decisions.
 - Report any challenges or problems encountered during the design phase and how they were addressed.
4. Visual Aids and Citations:
 - Utilize drawings, graphics, photographs, pictures, and tables to illustrate key points.
 - Ensure proper citation of sources and references for all content used.

All content should be compiled and submitted digitally via A1 posters in portrait format. The exact submission date will be announced later, likely during the final exam week/s.

This assignment will provide students with a practical understanding of the complexities involved in architectural design and construction, as well as the legal and managerial aspects of such projects.
